HYPER ISLAND

Learning Objectives

1

Where the 'profession' of law has been - the industry model - and where it is going
Skills required beyond 'black letter law' taught in law school

2

New models for business, design and legal operations
Software is eating the world

3

Creating value in new places
The Maker Movement in Legal Services

A black and white portrait of an elderly man with a mustache, wearing a dark top hat and a dark suit with a white shirt and a dark bow tie. He is looking slightly to the right of the camera. The background is a mottled, light gray.

Cravath

A black and white portrait of a man wearing a top hat and a suit, looking slightly to the right. The image is the background for the entire slide.

Recruiting staff

*Hire the “best of the best” from law school
Only new graduates were to be hired, except
in extenuating circumstances.*

Tenure

*Partners are permanent. Associates are “up
or out” if not made partner within 8 years.*

Training staff

*Associates would be assigned to a
partner for a period of time (usually 18
months or less)*

Choosing partners

*Unless there is some need for expertise
unavailable within the firm, partners should
only be chosen from within the office.*

Compensation

Lockstep

Y1 - paid the same

Y2 - paid the same

Y3 - paid the same

Cravath

A low-angle, upward-looking photograph of several tall skyscrapers in a city, likely New York City. The buildings are made of glass and steel, with many windows reflecting the sky and some showing interior lights. The perspective creates a sense of height and scale. The sky is a clear, pale blue. The text "Billable Hours" is centered in the middle of the image in a white, sans-serif font.

Billable Hours

Billable Hours

The billable hour became the de-facto standard in the 1960s during a time when lawyers would write times at the bottom of client folders to keep track of time spent on a case.

Law firm consultants championed the billable hour as a means of increasing profit.

The gray line that existed between “doing client work” and “doing client work that justified the price charged” started to fade.

Where is Opportunity?

(hint: OPPORTUNITY IS EVERYWHERE)

Case background: Under the rules of the European Union, all airlines must pay passengers compensation of €250-€600 (C\$345-C\$829) for cancelled or heavily delayed flights in or out of an EU airport, or where they were denied boarding because of overbooking.

However, the airlines have routinely been turning down legitimate claims in the hope that consumers will simply give up and go away

The rules do not cover **extraordinary events** outside an airline's control but do cover delays for maintenance – a common reason for cancellations, as are over-hour crews, computer issues, and much more.

Huzar V Jet2 and Dawson V Thomson cases:

Landmark cases for consumers in England and Wales.

An estimated 14 million passengers benefit from the decisions

Opens backlog of claims estimated to be worth approximately **C\$1.5 BILLION** per year.

A decade or so ago, almost nobody would have looked at legal operations (or law department management) as a hot career path. In fact, a lot of people in the law business would likely have struggled to come up with a good description of what legal operations managers actually do.

General Electric, Bank of America, Prudential and other East Coast financial industry firms had begun hiring legal operations specialists for their law departments back in the 1990s, and by the end of the decade, Cisco Systems, Inc., Hewlett-Packard Company, and a handful of other Silicon Valley firms had followed suit. But it still took another few years for the trend to really catch on.

Now, not only are an increasing number of corporate law departments hiring operations pros, but the role they play—in managing outside vendors and contracts, and in implementing new technology and otherwise driving efficiencies and containing costs—has continued to expand.

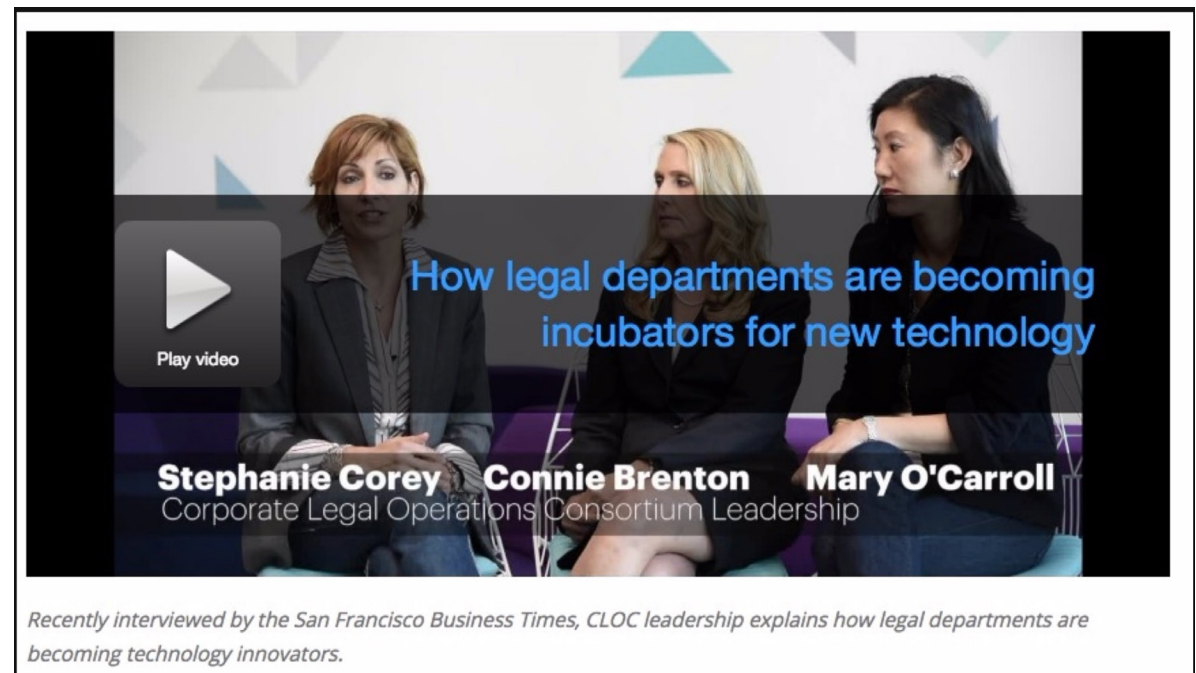

Many GCs, such as Cisco's Mark Chandler, have come to regard their operations teams as indispensable. And legal industry insiders predict that the demand for savvy operations specialists will only grow.

Design Thinking

Training in Legal Design & Tech

We are training law students, lawyers, designers, and others to design quality legal products.

Stanford
Law School

Plain Language → Legal Design

How do we write legal text so that it is more comprehensible?

What words do we use? How do we compose sentences?

Are we speaking in the right tone & style to resonate with our target users?

How do we communicate legal information so that it is more usable & engaging?

How do we use graphics to communicate better?
Interactive experiences?
Technology channels?

Are we creating full communication experiences to engage our target users?

Moving from Plain Language standards to Legal Design standards, for a more comprehensive & tech-enabled approach to how we communicate legal info.

Where law & design met: Examples of legal design

D.school fellow Margaret Hagan (standing, right) delivers remarks with Ron Dolin (seated, left) on Jan. 30 at Stanford Law School. (Kursat Ozenc)

The legal system has a large, unmet need, according to d.school fellow Margaret Hagan and Stanford Law School Research Fellow Ron Dolin. The two addressed this last week in their presentation, "Adventures in Legal Technology and Design" at Stanford Law School. The talk was attended by over 50 people and hosted by the [The Stanford Center on the Legal Profession](#).

There were three big takeaways Margaret and Ron wanted audience members to walk away with:

- There's a big unmet need in the legal system.
- Stanford can make a unique contribution.
- They have established a proof of concept.

New legal tools are emerging along with new paths for legal professionals, which means there is a need, Margaret and Ron outlined, for greater cross-training of legal professionals — particularly in the fields of technology and design. In the short term, the two have been working on a variety of workshops and classes, including a workshop on immigration law and design and a pop-up class called "Law by Design: Making Law People-Friendly". That second class focuses on end-of-life planning and is being taught by Margaret, Ron and d.school Fellow [Fred Leichter](#) in collaboration with Fidelity Investments.

From Revolution to Evolution

Legal Expert Systems in the Classroom

Design

The role of lawyers is shifting from representing clients on individual matters to designing processes and systems to solve client problems. As part of this trend, legal technologies are increasingly important to 21st century practice. New career paths as legal solutions architects are emerging that require law graduates to think differently about law. These changes in the market for legal services is prompting law schools to revisit their curriculums with an eye to incorporating principles of legal systems design.

Teamwork

In today's legal and business environment the ability to work effectively on a team is a core skill. The traditional law school curriculum provides few opportunities to learn teamwork. Experiential courses where students work together to execute ambitious projects offer an opportunity to learn to draw on the diverse strengths and skills among teammates.

Apps

Law students are eager to work on projects that have meaningful consequences. Apps that increase access to the legal system satisfy this deep urge to engage with the world outside the classroom and draw on the digital facility students developed before they came to law school.

Technology. Efficiency. Results. Clients insist on it. Justice demands it. The second machine age has arrived. No coding required.

Teaching the Technology of Practice: The 10 Top Schools

Volume 40 Number 4

By Richard Granat & Marc Lauritsen

About the Authors

Richard Granat is president of DirectLaw Inc., a virtual law firm platform provider, and LawMedialabs Inc. He also serves as co-director of the Center for Law Practice Technology at Florida Coastal School of Law and co-chairs the ABA's eLawyering Task Force.

Marc Lauritsen, author of *The Lawyer's Guide to Working Smarter With Knowledge Tools* (ABA Law Practice Division 2010), is president of Capstone Practice Systems and of Legal Systematics. He directed the clinical program at Harvard Law School and has worked extensively on document drafting and decision support systems. He also co-chairs the ABA's eLawyering Task Force.

Law schools, like lawyers, are in a tough period. Demand is down. Competition is up. These trends are spurring innovation as well as nail biting. We report here on one corner of the emerging scene: the state of attention to legal technology in U.S. law schools, and we identify 10 schools that are leading the way.

TAKING THE PROFESSION TO TASK

In 2000, ABA President William Paul established an eLawyering Task Force within what is now the Law Practice Division (LP). Its mission has been to alert the profession to the challenges of practicing in an era of technological change and to advance knowledge about how lawyers can both prosper and advance access to justice by leveraging new electronic tools and media.

At an initial meeting of the Task Force, Gary Munneke, the leading educator on the subject of law practice management and then chair of LP, recommended that law schools update their law practice management and legal technology courses to reflect the impact that the Internet would have on the practice of law. Fourteen years later, only a small number of schools have made a sustained commitment to do so, and many neglect the technology of practice entirely.

LAW AND TECHNOLOGY

Academic attention to the "law of technology"—including intellectual property, defamation, product liability, software transactions, computer crime, Internet policy and related topics—has been widespread for decades. Most law schools have courses and other activities that address the rich fabric of legal, ethical and policy issues presented by the use of technology in business, government and society. Harvard has the Berkman Center for Internet & Society. Stanford has the CodeX Center
